

What is Green Mulch?

The Green Industry is going greener. Instead of traditional hardwood mulch many people are transitioning to “green mulch” and using appropriate plants to replace sterile shredded bark. Over time, green mulch is a more economical and environmental beneficial solution. Green mulch plants will grow and form communities; cooling the soil, preventing erosion, conserving moisture and suppressing weeds. Incorporating a diverse mixture of plants, especially native plants is important. Plants with rhizomatous or stoloniferous roots will quickly fill in around other plants. *Native
